

# *six things your* **ADVISORS**

WISH YOU WERE ASKING  
OR TELLING THEM!

1

## **ENGINEERING**

"I wish that the students just wouldn't lie. **It is easier to help early rather than later.** Students saying that everything is good and all A's, when it is not causes problems later. That lie creates so much more work for me and the student rather than dealing with the problem sooner."

- Todd Easton

2

## **BUSINESS**

Chris Shumway states that there are a top three things that come to his mind. He wants questions about the **tutoring** resources on campus, how to get **involved**, and how to/when to apply for **scholarships**. There is so much good that can come from getting involved and knowing what Kansas State Offers!

3

## **AG**

"I would suggest students talk with their advisors about **internship opportunities** and how to go about finding an internship. This is to say that advisors could also use additional training in this area. I think students could inquire if a **professional school or graduate school** is an appropriate path for them. Asking about this will prompt discussion with the advisor about the difference and benefits/costs of considering graduate school." - Jason Bergtold

4

## **ART AND SCEINGES**

"I wish that more students understood that, at the end of the day, you are a consumer who is investing a great deal of time, effort, and money into earning a degree, and you should **make good use of all of the academic resources that available to you**, because you are paying for them whether you use them or not."

- Kathy Lillich

5

## **ARCHITECTURE**

"I think one of the most important things to convey to students is encouraging them to **reach out for assistance sooner rather than later.** Reaching out to their academic advisors for assistance can make a world of difference. The sooner we know there's a problem, the more time we have to help the student resolve it."

- Stacy Chard

6

## **EDUCATION**

"Ask an advisor questions like, **"How will this help me in the future"**. I think it's easy for a student to see a requirement and immediately try to rush through it or think it's just a check the box type of requirement. To me, that's the wrong **mindset** to have. This can be overcome by simply becoming more informed."

- Todd Duntz

**Ask the right questions when you are enrolling!**
